

What is CSS?

- **CSS** stands for **Cascading Style Sheets**
- Styles define **how to display** HTML elements
- **External Style Sheets** can save a lot of work

Example of Internal CSS

```
par
{
text-align:center;
color:black;
font-family:arial;
}
```

Example of External CSS

```
<head>
<link rel="stylesheet" type="text/css" href="mystyle.css" />
</head>

<p class="par">
    Your text starts here!
</p>
```

Source code of

```
.par
{
    text-align:left;
    color:black;
    font-family:arial;
}
```

Example of CSS for Link

```
A:link {text-decoration: none;
        font-family: "Trebuchet MS";
        font-size: 14px;
        font-style: normal;
        color: #444444;
    }
A:visited {
        text-decoration: none;
        font-family: "Trebuchet MS";
        font-size: 14px;
        font-style: normal;
        color: #444444;
    }
A:active {
        text-decoration: none;
        font-family: "Trebuchet MS";
        font-size: 14px;
        font-style: normal;
        color: #444444;
    }
A:hover {
        font-family: "Trebuchet MS";
        text-decoration:underline;
        font-size: 14px;
```

```
font-style: normal;  
color: #295c99;  
}
```
